

Sleaford Leisure Centre

Project:
Leisure Centre
Refurbishment

Location:
Sleaford, Lincs

M&E Contractor:
Nigel Smith Plumbing
& Heating

Completion:
November 2013

The refurbishment of this 1970's building has turned it into one of the most sustainable Leisure Centres in the country, with all of its heat coming from a renewable source.

Built on the site of the original 1872 outdoor baths, the new facility provides a 25m pool, splash zone, sauna and steam rooms, dance studio, gym and weights room.

IBMS installed the *TREND* Building Energy Management System which controls all of the buildings heating, air conditioning, ventilation and pool temperature.

District Heating is sourced from a nearby straw-burning power station, which otherwise would have gone to waste in cooling towers.
